

## Service Overview

*The Email Defense Service provides organizations with an additional layer of email threat protection at their network perimeter—identifying, quarantining, blocking and stripping spam, viruses, worms, and malicious and unwanted content before they enter or leave the network.*

Controlling spam: reducing the loss of employee productivity, bandwidth, and IT resources

## Stop Spam and Viruses Now!

**BEWARE OF SALESMAN ANNOYINGOUS**

Sells everything from insurance to sex enhancing drugs. You block him, but he always comes back to waste your time.

Eliminate **Spam** in all its forms.

Spam. Viruses. Malicious content. They cost your organization – employee productivity, increased security risk, legal liability.

Protect your organization with LOGIX's Email Defense Service.

### Stops Over 98% Of Spam

Using leading technology from MXLogic, we stop over 98% of spam. Email is filtered for spam and viruses in milliseconds where it is checked for spam and viruses before they enter your network and reach your inbox. Suspect emails are placed into the message quarantine.

### You Are In Control

Users can allow or deny senders, reject or release messages directly from the quarantine email or via a web-based interface.

Leave your IT team to work on strategic

business initiatives instead of managing spam.

LOGIX's service gives you advanced web-based functionality for handling quarantined mail and configuring the email defense service. Additional reports provide insight into your messaging and user traffic.

### No Hardware Or Software To Install

LOGIX service provides 24-hour protection. There is no hardware or software to install or update. There are no migration or integration efforts – just point your domain's mail routing (MX) record to LOGIX and the service is activated.

Messages are filtered instantaneously. Email is never stored, read or censored. Your privacy is ensured.
