

LOGIX SHARED HOSTING SERVICES

Reliable Global Hosting Service for
Business and Electronic Commerce

LOGIX Shared Hosting Service is a global Web hosting service that provides your organization with a secure 24-hour interactive presence and an uptime guarantee that your business site always will be available. The service features a unique architecture with servers that are redundantly connected via high-speed lines to *LOGIX*'s backbone. We have designed a unique Web hosting environment that is divided into several application functions:

- World Wide Web (http)
- File Transfer (ftp)
- Content Management (Data Storage)
- Electronic Payment Processing
- Multimedia Services

Each application operates on separate servers that are optimized for performance measurements unique to that application. We implement back-up services to ensure your content is protected at all times, and we provide you with your own domain name, monthly traffic reports, and the ability to write your own CGI scripts. (Other web-hosting providers place your site on one centralized server, which creates a potential single point of failure).

LOGIX also guarantees that your business Web Site will be up and running, every day of the year.

World-Class Network Operations and Support

LOGIX's Network Operations Centre monitors our network 24 hours a day, seven days a week. Field service teams provide on-site service and solutions, anytime and anywhere. Our Customer Support Group provides unlimited telephone and e-mail consultation during business hours to solve problems or improve network performance.

Direct and Redundant Network Access

LOGIX servers are directly and redundantly connected to the *LOGIX* network via 100 Mbps Ethernet connections to provide fail-safe circuits and to optimize speed to your Web site.

***LOGIX* Offers a Full Range of Hosting Services**
